Chapter 1

Clemanglaise

This program creates vocabulary tests in different languages using words from an online or a local database.

How to use?

Usual method, working on Linux, Mac or Windows

- First Qt must be installed on your computer.
 - Qt installer for MAC 64 bits
 - Qt installer for Linux 64 bits
 - Qt installer for Windows
- Open the project **clemanglaise.pro** with QtCreator.
- Compile with qmake in the compilation tab.
- Compile the project (hotkey: CTRL+B).
- Run the project (hotkey: CTRL+R) and enjoy!

If you are an **administrator** after opening the project, you have to set a password argument to run the application.

- To do it follow this path : **Projets > Paramètres d'exécution**
- Then set Arguments to `-p PASSWORD` or `-password PASSWORD`
- If you want to open help wizard set Arguments to `-h` or `-?` or `-help`

For command-line users

To compile it:

- Check that the location of the `qmake` is in your `$PATH` variable.
- Don't regenerate the project file, use the one provided in the repository.
- Type `qmake` in the command line.
- Type `make` in the command line.

To run the application, type `./clemanglaise` in the command line if you are using Linux, or open `clemanglaise.app` if you are using the Mac.

To run the application as an **administrator** type `./clemanglaise -p` and type the password.

To show help wizard type `./clemanglaise -h|-?|-help`

Enjoy!

Chapter 2

Class Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

EditView	??
HandwritingArea	8
HomeWindow	8
LanguageButtons	8
NetworkReplyReader	9
Parser	9
SearchView	??
Test	11
TestView	??
ThemeView	??
WordView	??
AnswerView	??
QuestionView	??

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

AnswerView	??
EditView	??
HandwritingArea	8
HomeWindow	8
LanguageButtons	8
NetworkReplyReader	9
Parser	9
QuestionView	??
SearchView	??
Test	11
TestView	??
ThemeView	??
WordView	??

Chapter 4

Class Documentation

4.1 AnswerView Class Reference

Inheritance diagram for AnswerView:

Public Member Functions

- **AnswerView** ([Test](#) &test, QWidget *parent)
- **AnswerView** (const QStringList &reply_list, const QString &player_answer, [Test](#) &test, QWidget *parent)

Additional Inherited Members

The documentation for this class was generated from the following file:

- AnswerView.h

4.2 EditView Class Reference

Public Slots

- void **edit_word** ()
- void **read_reply** (QNetworkReply *reply)
- void **show_confirmation** (QNetworkReply *reply)
- void **show_confirmation** ()
- void **back** ()
- void **reset** ()
- void **find_themes** ()

Public Member Functions

- **EditView** ([Test](#) &test, const QString &title, const QStringList &default_values, const QString &OK_button_value, const QString &php_filename, const QString &success_message, QWidget *parent)
- void **read_reply** (QString reply_string)
- void **disable_edition** (bool ok)

The documentation for this class was generated from the following file:

- EditView.h

4.3 HandwritingArea Class Reference

Public Member Functions

- **HandwritingArea** (QSize size, QWidget *parent)
- void **mouseMoveEvent** (QMouseEvent *event)
- void **mouseReleaseEvent** (QMouseEvent *event)
- void **mousePressEvent** (QMouseEvent *event)
- void **paintEvent** (QPaintEvent *event)

The documentation for this class was generated from the following file:

- HandwritingArea.h

4.4 HomeWindow Class Reference

Public Slots

- void **start_test** (int i)
- void **init** ()

Public Member Functions

- **HomeWindow** (bool admin=false, QWidget *parent=0)

The documentation for this class was generated from the following file:

- HomeWindow.h

4.5 LanguageButtons Class Reference

Signals

- void **clicked** (const QString &text)

Public Member Functions

- **LanguageButtons** (const QList< [Test](#) > &tests, QWidget *parent, const QStringList &flags)
- void **disconnect_all** ()

The documentation for this class was generated from the following file:

- LanguageButtons.h

4.6 NetworkReplyReader Class Reference

Public Slots

- void **read_reply** (QNetworkReply *reply)

Public Member Functions

- **NetworkReplyReader** (QObject *parent=0)
- void **print** (QString s)

Static Public Attributes

- static QNetworkCookieJar * **cookie_jar**

The documentation for this class was generated from the following file:

- NetworkReplyReader.h

4.7 Parser Class Reference

Signals

- void **appendDone** ()

Public Member Functions

- **Parser** (const QString &srcDst, QString file_in="file_in", QString file_out="file_out", QString score_file="file_score", QObject *parent=0)
- unsigned int **nblines** (const QString &files) const
- QString **getFilein** () const
- QString **getFileout** () const
- QString **getSrcDst** () const
- QString **getScoreFile** () const
- QString **getRandomLine** (const QString &files) const
- QString **split_line** (QString line, const QString &delim="\n") const
- QString **search** (const QString &word, const QString &files) const
- QString **getLineId** (const int &id, const QString &files)
- QString **getCellId** (const int &id, const int &nb, const QString &files)
- QString **getScoreId** (const int &id)
- int **getLastId** (const QString &files)
- void **parse** (const QString &files)

- void **writeInFile** (const QString &text, const QString &files)
- void **appendInFile** (const QString &text, const QString &files)
- void **addInFile** (const QString &text, const QString &files)
- void **deleteLineId** (const int &id, const QString &files)
- void **updateLineId** (const int &id, const QString &new_text, const QString &files)
- void **update_score** (const int &id, const int &correct)

Static Public Member Functions

- static QString **getline** (const unsigned int &number, const QString &filename)
- static QString **getThemeFile** ()
- static QString **getTheme** (const int &id)
- static QString **get_working_path** ()
- static QString **get_working_path** (const QString &file)

4.7.1 Member Function Documentation

4.7.1.1 static QString Parser::getline (const unsigned int & *number*, const QString & *filename*) [static]

Returns

the numberth line of filename

4.7.1.2 QString Parser::getLineId (const int & *id*, const QString & *files*)

Returns

the line with the specified id

The documentation for this class was generated from the following file:

- Parser.h

4.8 QuestionView Class Reference

Inheritance diagram for QuestionView:

Public Slots

- void **disable_validation** ()

Public Member Functions

- **QuestionView** (Test &test, QWidget *parent)
- QString **getAnswer** ()
- void **ask_question** (const QString &word, const QString &theme)

Additional Inherited Members

The documentation for this class was generated from the following file:

- QuestionView.h

4.9 SearchView Class Reference

Public Slots

- void **search** ()
- void **read_reply** (QNetworkReply *reply)
- void **back** ()
- void **action** (int row, int col)
- void **refresh** ()

Public Member Functions

- **SearchView** (Test &test, bool modifiable=false, QWidget *parent=0)
- void **read_reply** (QString reply_string)

The documentation for this class was generated from the following file:

- SearchView.h

4.10 Test Class Reference

Public Member Functions

- **Test** (int id, const QString &name, const QString &src, const QString &dst, bool remote=true)
- int **getId** () const
- const QString & **getName** () const
- const QString & **getSrc** ()
- const QString & **getDst** ()
- bool **isRemoteWork** () const
- void **setRemoteWork** (bool where)
- void **addTheme** (const QString &theme)
- QSet< QString > & **getThemes** ()

The documentation for this class was generated from the following file:

- Test.h

4.11 TestView Class Reference

Public Slots

- void **init** ()
- void **update_request** ()
- void **read_reply** (QNetworkReply *reply)

- void **read_reply_themes** (QNetworkReply *reply)
- void **validate_question** ()
- void **validate_answer** ()
- void **find_themes** ()
- void **add_theme** ()
- void **add_word** ()
- void **update_word** ()
- void **search** ()
- void **go_back** ()
- void **update_question** (int)

Public Member Functions

- **TestView** ([Test](#) &test, QString str_title="", bool admin=false, QWidget *parent=0)
- void **read_reply** (QString reply_string)

The documentation for this class was generated from the following file:

- TestView.h

4.12 ThemeView Class Reference

Public Slots

- void **edit_theme** ()
- void **show_confirmation** (QNetworkReply *reply)
- void **show_confirmation** ()
- void **read_reply** (QNetworkReply *reply)
- void **find_themes** ()
- void **back** ()
- void **reset** ()

Public Member Functions

- **ThemeView** ([Test](#) &test, const QString &title, const QStringList &default_values, const QString &OK_button-_value, const QString &php_filename, const QString &success_message, QWidget *parent)
- void **read_reply** (QString reply_string)

The documentation for this class was generated from the following file:

- ThemeView.h

4.13 WordView Class Reference

Inheritance diagram for WordView:

Public Member Functions

- **WordView** ([Test](#) &test, QWidget *parent)

Protected Attributes

- [Test](#) test
- QHBoxLayout * **horizontal_layout**
- QVBoxLayout * **right_vertical_layout**
- QVBoxLayout * **vertical_layout**
- bool **handwriting**
- QPushButton * **OK_button**

The documentation for this class was generated from the following file:

- WordView.h
